Referring Veterinarian:	_____	Phone:	_____
Referring Clinic:	_____	Fax:	_____
Owner's Name:	_____	Owner's Phone:	_____
Pet's Name:	_____	Age /DOB:	_____
Sex:	_____	Breed:	_____

Please fax or mail the following information along with this form. This information will be reviewed and we will call your client to schedule a consultation appointment for I-131 therapy.

Checklist	Medical History	
<p>***All labwork must be current within the last 30 days***</p> <p><input type="checkbox"/> Normal CBC/Chem/UA <i>(reference lab)</i></p> <p><input type="checkbox"/> Total T4 or Free T4 (ED) <i>(reference lab)</i></p> <p><input type="checkbox"/> T4 off of methimazole for at least 14 days <i>(if currently on medication)</i></p> <p><input type="checkbox"/> Urinalysis <i>(reference lab)</i></p> <p><input type="checkbox"/> Blood Pressure</p> <p><input type="checkbox"/> Lateral and VD Thoracic X-rays <i>(within 3m)</i></p> <p>(Please forward results at time of consultation.)</p>	<p>History of Renal Disease/Failure? Y _____ N _____</p> <p>History of Heart Disease/Failure? Y _____ N _____</p>	<p>Behavior Social _____ Neutral _____ Aggressive _____</p> <p>Known Adverse Drug Reactions?</p>
	<p>Prior treatment of hyperthyroidism by Surgery or I-131? Y _____ N _____</p> <p>If yes please explain:</p>	<p>Current Medications:</p>
		<p>Other Medical Problems:</p>

If current radiographs or an ultrasound study is needed, these can be performed at Veterinary Specialty Center of Tucson.

Methimazole Trial	
<p>Has the cat received methimazole? Y _____ N _____</p> <p>How long has the cat been on methimazole? _____</p> <p>Was euthyroidism achieved while on methimazole? Y _____ N _____</p>	<p><input type="checkbox"/> A methimazole trial should be conducted to assess the potential for unmasking renal disease that may have been obscured by the hyperthyroid state. Methimazole must be given at an adequate dose to induce a euthyroid state for at least 2-4 weeks followed by retesting of T4 (to confirm euthyroid state) and a concurrent renal profile with urine specific gravity.</p>
<p>Renal function while euthyroid on methimazole: Date: __/__/__ BUN: _____ Creatinine: _____ USG: _____ T4: _____</p> <p>T4 values following withdrawal of methimazole for at least two weeks <i>(only if treated with methimazole for more than two months)</i> T4: _____ Free T4 (ED): _____</p>	<p><input type="checkbox"/> If the patient has been on methimazole for over two months, the drug should be stopped for two weeks and the Total T4 and Free T4 by equilibrium dialysis should be remeasured. If the results still support hyperthyroidism, the patient can be scheduled for I-131 therapy. If the Total T4 is low normal (or high normal with normal free T4 by ED), keep the cat off methimazole until the values again support hyperthyroidism rechecking every 2-4 weeks.</p>
